

Building in an Environmentally Sustainable Manner

ITE - GREEN MARK PLATINUM AWARD

Gammon Construction is proud to achieve both the Green Mark Platinum Award for the new ITE College West and be the recipient of the inaugural Green and Gracious Builders Award.

The New ITE College West will further enhance ITE's vision to be A Global Leader in Technical Education. It is the first social infrastructure project in Singapore to be delivered under a Public-Private Partnership (PPP). As the second of three comprehensive mega-campus under the "One ITE System, Three Colleges" Model, the new ITE College West will provide a community oriented College specialising in service excellence.

Fundamental to the design are principles of passive solar architecture including appropriate orientation, careful zoning of spaces & solar shading. These principles are integrated with highly efficient active systems & controls. High efficiency chillers & lighting are directly controlled in response to actual usage. Motion detectors and comprehensive facility booking systems further limit wastage. Solar heaters and heat pumps are also included.

A two level elevated Walkway connects all buildings and provides a social conduit through the college dramatically reducing student "travel" times. Diversity in settings through creative landscaping further enhances an environment encouraging social interaction. At its heart is a spectacular sheltered Events Plaza.

All this and more is being delivered by a multi-disciplined design team and supply chain led by Gammon Pte Ltd, with the strong support of ITE, our PPP Partner.
